

INTRODUCTION

Centuries before the modern-day farming tools, Indigenous Peoples knew the importance of fish as a fertilizer. They adopted different techniques to get the best usage of fish for the maximum output towards their crop yields. Naturally slow-feeding, broad spectrum fish based fertilizers nourish the soil ecology and are loaded with organic content that breaks down slowly to feed plants and soil microbes over time.

BioFert's **BioFish** is an organic and natural, odour-free fish based liquid fertilizer for all crops. It is derived using a unique aerobic fermentation process that makes nutrients readily available for plant use. Because of its unique formulation, it can be used as drench as well as in drip and foliar applications.

NUTRIENTS	Value	SIZES	SKU
Total Nitrogen (N)	3.00 %	20 L	BF1890146
Available Phosphoric Acid (P ₂ O ₅)	1.00 %	1000 L	BF1890142
Soluble Potash (K ₂ O)	2.00 %		
Sulphur (S)	1.00 %		

PRODUCT CHARACTERISTICS		
Appearance	pH	Specific Gravity
brown liquid	3.5 - 4.0	1.8 g/mL

DIRECTIONS FOR USE

Stir or shake well before use.

APPLICATION RATES

Potting plants drench: 10-15 ml in 1 liter of water (1-2 times a month for indoor plants)

Drip & Drench: Use 10 - 20 L/acre.

Foliar: Use 4 - 8 L/acre,

Greenhouse: 1.5 to 3.5 EC depending on need.

BENEFITS

- Provides primary macronutrients (NPK) as well as Sulphur including some micronutrients.
- Enhances microbial activity in soil and increases nutrient availability for plants.
